

4IRI offers AI and Machine learning courses

AI makes it easier for people to do everyday things. From typing emails on the go to providing new ways of looking at existing problems, like rethinking healthcare to advancing scientific discovery. More and more organisations realise that business intelligence is profoundly impacted by machine learning and are choosing to invest in it. But what is AI? Artificial intelligence is intelligence demonstrated by machines. While AI is the broad science of mimicking human abilities, machine learning is a specific subset of AI that trains a machine to learn.

AI & Machine Learning Courses

Learn how AI and Machine Learning work. Developed in partnership with Women in AI, the global networking platform for women in AI, our AI courses are ideally suited to the curious mind.

Choose between Robotics Process Automation (RPA) Coding and Machine Learning in R.

- Our RPA curriculum consists of a 2-week learning experience
- Our Machine Learning-R curriculum consists of a 10-day learning experience
